Engineering and Information
Technology || 2022 - 2026**

Current CGPA: 3.34/4.0
Last SPA: 3.62/4.0

INTRODUCTION

I am Muneeb, a dedicated Front-end engineer with hands-on experience I gained by working on my personal yet comprehensive and unique projects mainly using React JS and Javascript along with Tailwind CSS for styling. Skilled in creating user-friendly interfaces and integrating APIs. I am very passionate and I am also learning new stuff constantly.

Projects

• Portfolio

Keywords: Next.js 14, TypeScript, React.js, Tailwind CSS, Framer Motion, Aceternity UI

Created a personal portfolio to showcase my web development skills and projects. The portfolio features a dynamic, responsive design with smooth animations powered by Framer Motion. It serves as a hub for potential clients and employers to explore my work.

• Counsailor - AI-powered personal companion

Keywords: React.js, Tailwind CSS, React-Routing, Google Firebase, Firebase Authentication, Google Gemini API

Developed an AI-powered personal companion designed to offer comfort and support. Integrated Google's latest Gemini API to create empathetic and responsive interactions. The app features user authentication and secure data handling with Firebase

• Flowsphere - Secure Chat Application

Keywords: React.js, Tailwind CSS, React-Routing, Google Firebase, Firebase Authentication, Firebase Rules

Built a chat application that allows users to sign in via Google login, chat freely, and share files and images. Implemented secure authentication and data storage using Firebase.

• Dashzilla - Admin sales dashboard

Keywords: React.js, Tailwind CSS, Re-Charts

Developed an admin sales dashboard that visualizes sales data through various charts. The dashboard allows users to easily interpret and analyze sales trends. Note: The mobile version is not supported.

• Climeadeeno - Weather App

Keywords: React.js, Tailwind CSS, OpenWeather API

Created a weather app that provides real-time weather data based on the user's location and search input. The app uses the Google Navigator API to detect location and integrates with the OpenWeather API for accurate weather updates.

• Animebible - Content for Anime lovers

Keywords: React.js, Tailwind CSS, JavaScript, Jikan API

Designed an app tailored for anime enthusiasts. It displays random anime on load and allows users to search for specific titles or browse popular, trending, and upcoming anime.

• Gipharea - Gifs showing app

Keywords: React.js, Tailwind CSS, JavaScript, Giphy API

Developed a GIF search app that loads random GIFs on startup and allows users to search for and view trending GIFs through the Giphy API.
